

Test Plan for Sailor

Test Plan ID: TP-Sailor-001

Introduction:

This test plan outlines the strategy and scope for testing the Sailor e-commerce website (<https://www.sailor.clothing>). The goal is to make sure the website works properly and gives users a smooth and problem-free shopping experience.

- **Application overview**

Sailor is an online fashion and lifestyle retail platform designed to offer a modern shopping experience. The website supports essential e-commerce features such as user account management (registration, login, and password recovery), detailed product views, add-to-cart and checkout functionality, promotional banners, and dynamic filtering options.

- **Purpose**

The purpose is to ensure that all key features work correctly, the website performs smoothly, the user interface is visually consistent, and the overall platform is secure, responsive, and easy to use for customers across all devices. This test will help detect functional errors, layout inconsistencies, and navigation issues that may impact the user experience, thereby ensuring that the application meets the expected business and technical requirements prior to release.

Test Items:

List of the specific modules of the Sailor e-commerce website that will be tested:

- Authentication & User Management: Login, Registration, Logout, Forgot Password.
- Product Browsing & Filtering: Category listing, Filter and Sort options.
- Product Details: Product detail page, Image zoom, Size and color selection.
- Shopping Cart Management: Add to cart, Update quantity, Remove items & View cart.
- Checkout Process: Address input, Order summary & payment gateway.
- Search Functionality: Search bar, Autocomplete suggestions & Search results.
- Navigation & Menus: Main navigation menu, Dropdowns & Category links
- Footer Section: Contact info, Know Us, Shopping & Service info.
- Responsive Design: Layout and functionality checks on desktop, tablet, and mobile devices.

References:

Documents and standards referred to during the test planning and execution phase:

- IEEE 829 Test Documentation Standard: For test case and documentation structure

Features to be Tested:

This section lists the application features to be validated during testing:

- Authentication & User Management.
- Product Browsing and Search.
- Product Details Page
- Shopping Cart
- Checkout Process
- UI/UX and Navigation
- Cross-Browser Compatibility
- Responsive Design

Features Not to be Tested:

Specifies what will be excluded from testing:

- Third-party payment gateway integrations.

Test Approach:

The test approach will follow a phased process starting with requirement analysis, test planning, and test case creation. Manual testing will be performed to validate the complete functionality of the Sailor e-commerce website. Testing will be conducted in cycles, covering functional, usability, compatibility, and responsiveness aspects. No automation tools will be used at this stage; all tests will be executed manually.

Entry Criteria:

Conditions that must be met before testing can begin:

- Finalized requirements.
- Reviewed and approved test cases.
- Properly set up test environment.

Exit Criteria:

Conditions to be fulfilled before the testing phase can be closed:

- All critical test cases executed.
- No high-severity defects remaining.
- Test summary report completed

Suspension Criteria:

Situations when testing may need to be paused:

- Major blocker defects preventing further testing.
- Unavailability of test data or test environment issues.

Roles and Responsibilities:

Outlines the responsibilities of each team member:

- **Test Lead:** Responsible for planning, monitoring, and reporting the testing process.
- **QA Engineers:** Execute test cases and log defects.
- **Developers:** Fix reported defects.

Schedule:

A timeline for each phase of testing:

- **Test Planning:** Week 1
- **Test Case Design:** Week 2
- **Test Execution:** Weeks 3-4
- **Defect Fixing & Regression Testing:** Week 5

Training:

Training required for effective testing:

- **Domain Training:** Understanding the core functionalities of the Sailor e-commerce website, including user login, product filtering, cart operations, and checkout behavior to ensure accurate and effective testing.
- **Process Training:** Guidelines on manual testing strategies and techniques relevant to e-commerce flows like user actions, UI validation, and navigation across different modules.

Test Environment:

Details the hardware and software required for testing:

- **Hardware:** Windows/Linux machines with 8GB RAM, SSD storage.
- **Software:** Chrome, Firefox, Edge & Brave.

Test Deliverables:

Lists the documents and reports generated during testing:

- Test Plan Document
- Mind Map
- Test Scenarios
- Test Cases and Test Data
- Test Summary Report
- Bug Report

Approvals:

Specifies who has the authority to approve the test plan and test results:

- **QA Lead, PM, Development Team.**

Glossary:

Defines key terms used in the document for clarity:

- **QA:** Quality Assurance
- **PM:** Project Manager
